

C++ code 2.7.6: `main()` driver function for this problem → [GitLab](#)

```
2 int main(int argc, char *argv[]) {
3     if (argc > 1) {
4         std::string file_name(argv[1]);
5         std::pair<double, double> result = measureDomain(file_name);
6
7         std::cout << "The area of the domain is: " << result.first << std::endl;
8         std::cout << "The length of the boundary is: " << result.second
9             << std::endl;
10    } else {
11        std::cout << "Correct usage: Call this executable and supply the name of a "
12            "msh-file as a command line argument "
13            << std::endl;
14    }
15 }
```
